

Press Release
November 2008

Danish Microsoft Partner and their Customer

”First Mover” on: Microsoft Dynamics NAV 2009

TopSolutions has implemented Microsoft Dynamics NAV 2009 including TopSolutions Project Management solution at NaviCom in Denmark as one of the first worldwide.

”In 2007 we had a unique opportunity to become TAP (Technology Adoption Program) partner in the new Microsoft program. Being part of this development program gives us an exceptional opportunity to be in front. As one of the first in the world and three months before official release, we have transformed our worldwide solution Project Management on Microsoft Dynamics NAV to the new platform and implemented it at one of our customers, the Microsoft Gold certified Partner; NaviCom.

Already in 2006 Project Management was the first solution worldwide to be applied for test for the Microsoft Dynamics NAV 2009 version. In this way we are a true First Mover on Microsoft Dynamics NAV 2009 and the consequences for our 35 partners worldwide and their customers can not be underestimated.” says Tina Thomsen, CEO at TopSolutions.

”Generally the new role-based entry to ERP with Microsoft Dynamics NAV 2009, in a client which is particularly user intuitive, will be a set change of considerable dimension. The business and process like perspective will be reflected in the customers’ future management system. The only limit is the imagination; when it comes to all the new possibilities that Microsoft Dynamics NAV 2009 will give the customers in the future, not to mention their Microsoft Dynamics Partner.

Integration becomes a completely new business area in the future of Microsoft Dynamics NAV, and I am certain that the flexible transfer of business logic will bring entirely new standards to the market. Microsoft Dynamics NAV 2009 finally provides the partners and consequently their customers with the platform that will increase the synergy between all Microsoft products and thereby brings the customers an even better possibility in terms of getting the complete and optimal solution.

By employing NaviCom as our TAP customer we had the opportunity to test our application thoroughly and optimally. The TAP project was initiated in June and we have followed the time schedule to the letter. Consequently we are going live exactly as scheduled, September 16th 2008. It has been an intense process, almost all employees have been deeply committed in the analysis, process description and testing. We are very proud of succeeding at time.” says Tina Thomsen, CEO at TopSolutions

Microsoft Dynamics NAV 2009 has a characteristic, different technological platform compared to previous releases of the product. The new version contains new, flexible 3-Tier architecture and platform built on .NET, which supports effective integration and data exchange as well as optimal database performance. Microsoft Dynamics NAV 2009 is closely integrated with Microsoft SharePoint products and technologies. Microsoft Dynamics NAV 2009 provides the companies with higher flexibility and this way they will be able to adjust to new growth possibilities. Microsoft Dynamics NAV 2009 offers a completely new Role Tailored user experience and technology innovations, but retains the simplicity which has always been the brand of the solution.

Technically NAV 2009 has an extra layer compared to earlier versions, where the system consisted of a presentation layer and a database layer. This is now extended by an intermediary service layer for managing the business procedures. In addition to this the new Microsoft Dynamics NAV 2009 is built up according to role-based principles implying that all employees in the company – from receptionist and finance employees to the CEO – may access exactly the information they need in the system.

"We consider this process to be a competence build-up and we have gained a considerably competitive edge in relation to handling a reality based on a role-based access. I am certain that we are now well prepared for carrying the solution further on to our customers." says Jan Robert Christoffersen, CEO at NaviCom
